

Hackathon by Jaguar Land Rover

@ Nitra (Slovakia)

September 29-30, 2017

Applications accepted until 25.09.2017

DEVELOPER CHALLENGE 2017

Building on the great success of the Jaguar Land Rover Developer Challenge held in the UK last year, the team is taking the Innovation Forum to Slovakia. We are now accepting applications on the subject of 'smart mobility', with the following two challenges:

Finding solutions in Car-sharing and Inter/Multi-modal transport. More details you can find on the website listed below.

CHALLENGES

Our two challenges lie down on the development of stand-alone solutions in the format of web-applications or mobile apps for transport of people by cars, public transport, trains or other transport formats like bikes, etc. All focused on daily commuting to work in smaller and also bigger cities. Nitra in Slovakia and Jaguar Land Rover will be used as the use case while solutions should be scalable eventually to any other city or company as employer.

SOLUTIONS

We will be glad to see solutions that are engaging to use and easy to scale. Beneficiary of all solutions and mobile apps should be first individual users / travellers and secondly companies that provides each way of transport. Ultimate beneficiary is the city and region that should get more efficient and more ecological in the field of mobility.

Prizes in total value over €6000!

Application deadline is September 25th, 2017.

MEETUP

[learn more about challenges]

On Friday (Sep 22, 2017) @ 2pm
Jaguar Land Rover Slovakia, Nitra (SK)

[Advanced Registration required]
